

note: logging into phpmyadmin after fully setting up site will be a little different, please refer to maintenance in step 5 folder for more details

Loading phpmyadmin

- go to [Static-IP]/phpmyadmin
- log in using phpmyadmin credentials (see MCSC_Main setup)
- go to Databases
- in "name" field put "mcsc" then hit "create"

Setting up database import

- go to [Static-IP]/index.php, find location of file "php.ini" (should be listed somewhere in the page)
- connect with ssh to MCSC_Main
- cd into that directory
- run `sudo nano php.ini`
- find keyword `upload_max_filesize` (press f6 while in nano and then look it up), change value to 20M
- find keyword `post_max_size`, change value to 21M
- find keyword `memory_limit`, change it to some value $21M < x < 100M$
- may also need to change `max_execution_time` and `max_input_time`, play that by ear

Importing Database

- go back to the phpmyadmin page and click Import
- import the .sql file found in this folder, click Go, database should be imported
